

ABSTRACT OF THE DISCLOSURE

A cooking apparatus includes a body, a heating unit, a heat reflecting unit and a food support unit. The heating units are disposed between the food support unit and the heat reflecting unit. The heat reflecting unit includes first and second inner and outer reflecting plates to reflect heat generated by the heating unit toward the food support unit. The first and second inner and outer reflecting plates are arranged to form, roughly, a W shape so that first and second recesses are formed by the first and second inner and outer reflecting plates to collect oil. The food support unit includes a pair of water tanks seated on a top of the body while being spaced apart from each other and filled with water, and a plurality of grill pipes arranged to connect the water tanks so that the grill pipes are filled with water.
